PROFESSIONAL SUMMARY

B.Tech Computer Science and Engineering student (CGPA: 8.64/10) at AKGEC Ghaziabad with hands-on experience in machine learning, data analysis, and IoT-integrated systems. Built and deployed ML models including collaborative filtering, classification, and regression pipelines. Secured 2nd place at TECHNOVERSE 2026 Inter-College Hackathon. Seeking an AI/ML internship to apply skills in real-world problem-solving.

EDUCATION

Ajay Kumar Garg Engineering College (AKGEC), Ghaziabad *Expected May 2028*

B.Tech in Computer Science and Engineering | CGPA: 8.64 / 10.00

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Operating Systems

TECHNICAL SKILLS

Languages: Python (Primary), Java (Basic)

ML & Data Science: Machine Learning, Feature Engineering, Model Evaluation & Tuning, Classification, Regression, Recommendation Systems, Anomaly Detection

Libraries & Frameworks: Pandas, NumPy, Matplotlib, Scikit-learn

Tools & Platforms: Git, GitHub, ESP32, MQTT, WebSocket

PROJECTS

OORJA EcoGrid — IoT Smart Energy Management System *Jan 2025 – Present*

Python | ESP32 | MQTT | WebSocket | Anomaly Detection

- Designed a multi-room IoT energy monitoring system integrating ESP32 microcontrollers with real-time data streaming via MQTT and WebSocket protocols.
- Implemented anomaly detection logic to identify abnormal energy consumption patterns and trigger multi-room alerts across connected devices.
- Presented hardware-software integrated architecture at TECHNOVERSE 2026 Inter-College Hackathon among 20+ competing teams.

ML-Based Product Recommendation & Classification Engine *2025*

Python | Pandas | NumPy | Matplotlib | Scikit-learn

- Built a collaborative filtering recommendation model trained on 10,000+ user-interaction records with feature engineering and data preprocessing.
- Evaluated KNN, Decision Tree, and Logistic Regression classifiers using precision, recall, F1-score, and AUC; achieved 82% accuracy on held-out test data.
- Visualized model performance curves and feature distributions using Matplotlib to drive hyperparameter tuning decisions.

Titanic Survival Prediction *2025*

Python | Pandas | NumPy | Matplotlib | Scikit-learn

- Developed a binary classification model using Logistic Regression to predict passenger survival on the Titanic dataset.
- Performed exploratory data analysis, handled missing values, and engineered features from raw passenger data to improve model input quality.
- Achieved 81% classification accuracy on the test set; evaluated model using confusion matrix and accuracy metrics.

House Price Prediction *2025*

Python | Pandas | NumPy | Matplotlib | Scikit-learn

- Built a Linear Regression model to predict house prices based on structural and locational features extracted from real estate data.
- Conducted feature selection, handled outliers, and scaled input variables to optimize regression model performance.
- Evaluated model performance using R^2 score; visualized predicted vs. actual price distributions using Matplotlib.

ACHIEVEMENTS

- 2nd Place — TECHNOVERSE 2026 Inter-College Hackathon, AKGEC:** Runner-up in software/hardware integrated systems track among 20+ competing college teams.
- NCC Cadet — National Cadet Corps:** Demonstrated leadership, teamwork, and time management while balancing academic and extracurricular commitments.
